How to read orders from a spreadsheet to simulate the behaviors of different order mixes in the manufacturing process.

Currently, I am using uniform distribution to assign orders numbers and sizes to each item. I would like to use the spreadsheet.

Each item belongs to an order and each item has a different size for there are different quantities or product

Any insight is appreciated. Attached is an illustration of what I am trying to do.

| | A | B | C |
|---|---|---|---|
| 1 | OrderID | Size | Qty |
| 2 | 1 | 2 | 9 |
| 3 | 1 | 3 | 24 |
| 4 | 1 | 4 | 12 |
| 5 | 2 | 7 | 24 |
| 6 | 2 | 5 | 29 |
| 7 | 2 | 8 | 12 |
| 8 | 2 | 9 | 18 |
| 9 | 3 | 6 | 12 |
| 10 | 3 | 5 | 20 |
| 11 | 3 | 4 | 22 |
| 12 | 3 | 7 | 17 |
| 13 | 4 | 6 | 25 |
| 14 | 4 | 5 | 31 |
| 15 | 4 | 7 | 16 |
| 16 | 5 | 8 | 17 |
| 17 | 5 | 5 | 14 |
| 18 | 5 | 10 | 22 |
| 19 | 5 | 2 | 21 |
| 20 | 5 | 3 | 14 |
